

# **Locawork Overview**

## **A Smart Location-Based Platform for Jobs, Deliveries, and Events**

### **What is Locawork?**

Locawork is a location-based platform that connects employers, couriers, and event organizers. It provides both paid and free roles, combining geolocation, smart notifications, and offline capabilities to optimize workflows in job searching, deliveries, and event management.

### **Roles & Features**

- **Paid Roles:** Job posting & management, shipment coordination, event creation, and reporting tools.
- **Free Roles:** Job searching & applications, task tracking, and insights into nearby shipments and events.

### **Smart Notifications**

Push notifications and emails keep users informed. For example, users are alerted when they are within 200 meters of a job, shipment, or event.

### **Smart Ticket Validation**

Events use QR codes or RFID for automated ticket validation. Location detection validates tickets instantly, reducing queues and increasing satisfaction.

### **Offline Functionality & Security**

Secure local storage enables partial offline usage with synchronization when the internet is restored. Sensitive data such as card information is stored only locally.

### **Geolocation & Monitoring**

Locawork continuously tracks user location. If a user or courier goes offline, the last GPS location is recorded. Couriers going offline trigger server warnings for service providers.

### **Conclusion**

Locawork integrates real-time technology, offline functionality, and geolocation tracking to deliver a powerful and efficient platform for jobs, deliveries, and events.
